EDUCATION

NUCES-FAST University

Bachelor of Science in Software Engineering

Islamabad, Pakistan

Sep. 2020 – Jun. 2025

EXPERIENCE

DevOps Engineer

Mediatiz Foundation

Oct. 2025 – Present

Islamabad, Pakistan

- Managed AWS infrastructure (ECS/Fargate, RDS, ALB, CloudFront, CloudWatch, SES, Route 53) for Mediatiz LMS and Khudi App serving 1M+ users with 20–30K concurrent requests at peak load; sustained 99.9% uptime
- Reduced AWS cloud costs by 30% through CloudWatch-driven auto-scaling, ECS task-definition tuning, and workload-aware right-sizing across staging and production clusters
- Built GitHub Actions CI/CD pipelines for Android (APK/AAB), Laravel LMS, Django, and Next.js admin dashboard with zero-downtime ECS rollouts, Slack deployment alerts, and Google Play Console automation; eliminated manual release-engineering overhead
- Architected and deployed PyBot – a Django + Ollama (Gemma 2B) local LLM tutor running on self-hosted infrastructure – eliminating external LLM API costs and addressing data-residency requirements for student PII
- Built serverless Slack-to-Google Sheets automation on AWS Lambda, API Gateway, EventBridge, and S3 for daily cross-departmental reporting across 8 departments; replaced a manual workflow
- Ran in-house security testing on lms.mediatiz.org (brute-force, SQL injection, CSRF) using Kali Linux, SQLMap, and SonarQube; validated WAF rules and produced remediation reports adopted by the development team
- Configured CloudFront + S3 origin for low-latency PDF lecture delivery (RoboVive LMS); integrated JazzCash and HBL Pay gateways and AWS SES (SMTP credential rotation, SPF/DKIM hardening) into production
- Authored the internal LMS DevOps Automation Roadmap and built CloudWatch dashboards covering ECS cluster health, RDS performance, and cost tracking

DevOps Engineer

Poshmaal Technologies

Dec. 2023 – Oct. 2025

Islamabad, Pakistan

- Led full AWS-to-self-managed-VPS migration of firefly.online (IoT production platform) across EC2, ALB, RDS, ECS/ECR, VPC, S3, WAF, and Route 53 with measurable monthly cost reduction while maintaining client SLAs
- Designed and implemented Blue-Green deployment strategy to run legacy Node.js and new Spring Boot environments in parallel; delivered a low-downtime production cutover via Nginx upstream switching
- Architected Dev/Staging/Production environments from scratch on-premises; containerized and orchestrated 8+ microservices on Docker and Kubernetes with Nginx reverse proxy and resource quotas
- Built Jenkins + GitHub Actions CI/CD pipelines reducing deployment cycle time by ~70% via parallel build stages, artifact caching, and automated rollback triggers
- Implemented full-stack observability with Prometheus, Grafana, and Loki – custom service-level dashboards, real-time alerting, and centralized log aggregation
- Hardened all environments with SSL/TLS (Let's Encrypt auto-renewal), SSH key restrictions, UFW/iptables firewalls, fail2ban, and Vault-based secrets management

PROJECTS

SniperAI | *Python, Binance API, Nginx, Real-Time Systems* | sniperai.falcoflow.com

2025 – Present

- Built a live crypto futures signal platform: real-time Binance scanner, multi-timeframe technical analysis (EMA, RSI, VWAP, volume, S/R), adaptive scoring engine, and risk-defined execution with full trade-lifecycle tracking
- Deployed on Ubuntu VPS behind Nginx; applied kernel-level tuning (SCHED_FIFO real-time scheduling, CPU affinity pinning, mlockall memory locking) to minimize execution latency
- End-to-end solo ownership – product design, backend engine, infrastructure, deployment, and live operation under the FalcoFlow brand

AI DevOps Log Analysis System | *Python, FastAPI, MLflow, Airflow, DVC, Docker, HuggingFace*

2024

- Built NLP models for anomaly detection, issue classification, and automated root-cause analysis on infrastructure logs; reduced MTTR by ~45%

- Designed end-to-end MLOps pipeline: MLflow (experiment tracking + model registry), DVC (data/model versioning), Airflow (orchestration); containerized FastAPI inference microservice
- Minimized reliance on external LLM APIs by serving custom NLP models in-house for privacy and cost control

Kubernetes Observability Platform | *Prometheus, Grafana, EFK, Jaeger, OpenTelemetry, eBPF* 2025

- Deployed a full observability stack on EKS: Prometheus + Grafana for metrics, EFK (Elasticsearch, Fluentbit, Kibana) for logs, Jaeger + OpenTelemetry for distributed traces
- Integrated groundcover (eBPF) for zero-instrumentation kernel-level visibility; built custom PromQL alerts and dashboards for service-level objectives

Infrastructure-as-Code Task App | *Next.js, Supabase, Docker, Terraform, GitHub Actions* 2025

- Built a full-stack authenticated task app with Terraform-provisioned VM, Supabase (Auth + RLS database), Dockerized builds, and GitHub Actions CI/CD
- Demonstrated end-to-end IaC workflow – infrastructure, application, deployment – fully version-controlled and reproducible

RAG Handbook Assistant | *Python, FAISS, MiniLM-L6-v2, Ollama, Streamlit* 2025

- Retrieval-Augmented Generation chatbot for FYP handbook Q&A; local embeddings (MiniLM-L6-v2), FAISS vector search, and Ollama LLM – runs fully offline with page-level citations and threshold-based refusal

TECHNICAL SKILLS

Cloud & Infrastructure: AWS (EC2, ECS/ECR, RDS, ALB, S3, CloudFront, WAF, Lambda, API Gateway, EventBridge, CloudWatch, SES, Route 53, IAM, VPC), VPS, Linux (Ubuntu/Debian)

DevOps, CI/CD & IaC: Docker, Kubernetes (EKS), Jenkins, GitHub Actions, Terraform, Ansible, Nginx, Git, Blue-Green & Low-Downtime Deployments, Self-Hosted Runners, Bash/Shell Scripting

Observability & Monitoring: Prometheus, Grafana, Loki, EFK Stack (Elasticsearch, Fluentbit, Kibana), Jaeger, OpenTelemetry, eBPF (groundcover), CloudWatch Dashboards

DevSecOps & Security: AWS WAF, SSL/TLS (Let's Encrypt), OS & SSH Hardening, UFW/iptables, Vault (secrets), OWASP Testing (SQLi, CSRF, Brute-force), Kali Linux, SQLMap, SonarQube

AI & MLOps: MLflow, Airflow, DVC, FastAPI, HuggingFace, PyTorch, Ollama (local LLM), RAG (FAISS + MiniLM), LangChain, LangSmith

Databases & Languages: MySQL, MariaDB Galera + ProxySQL, Redis, PostgreSQL/RDS, SQLite, Supabase | Python, Bash, PHP/Laravel, TypeScript, Kotlin, Java/Spring Boot, Next.js, React, Django, Node.js
